

bmcs course

brittle/matrix cementitious composite structures

concrete: *Yoshimura vault, RWTH Aachen (2015)*

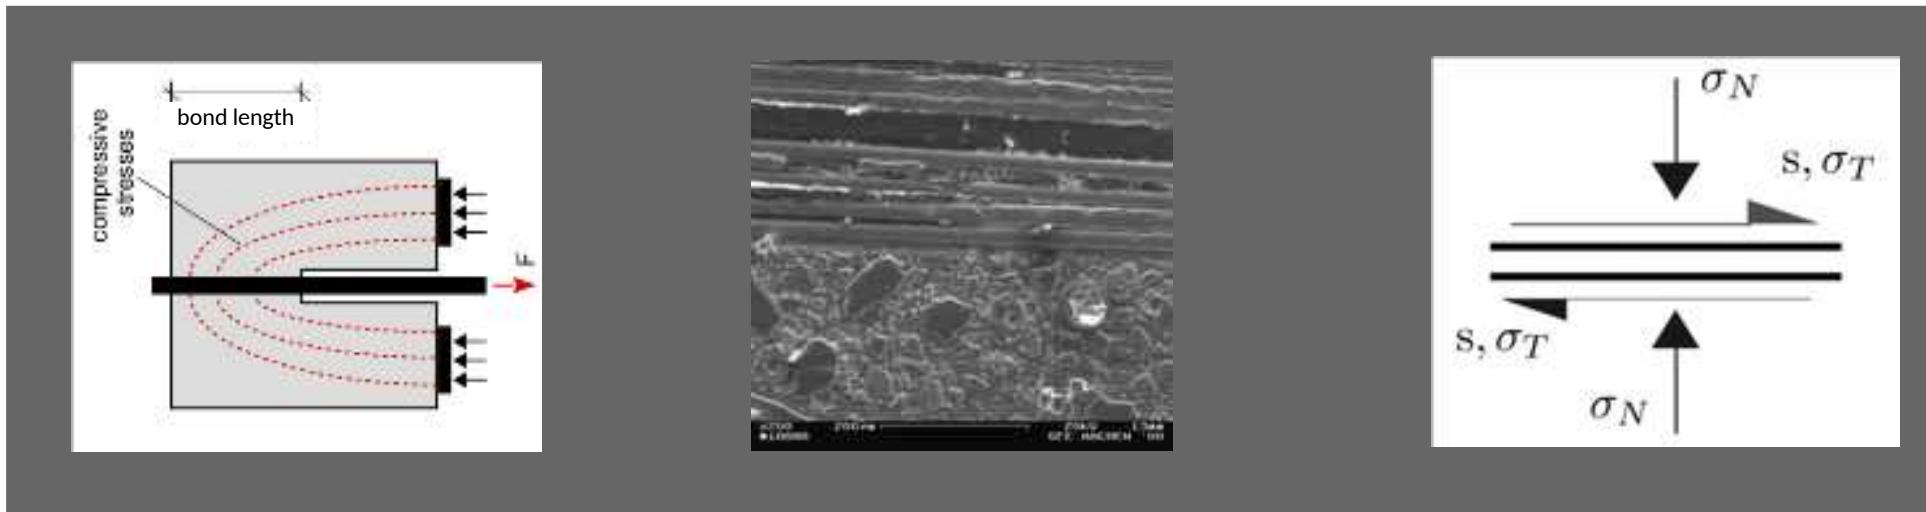

Rostislav Chudoba
Abedulgader Baktheer
Institute of Structural Concrete

... what is this course about ...

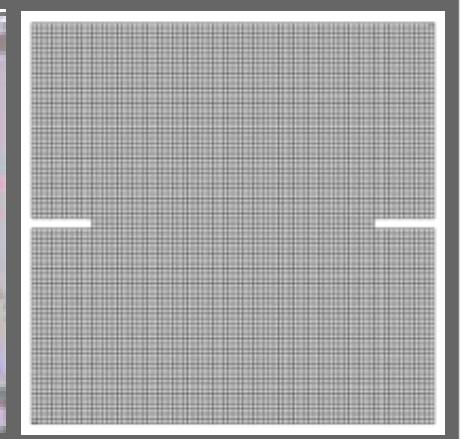

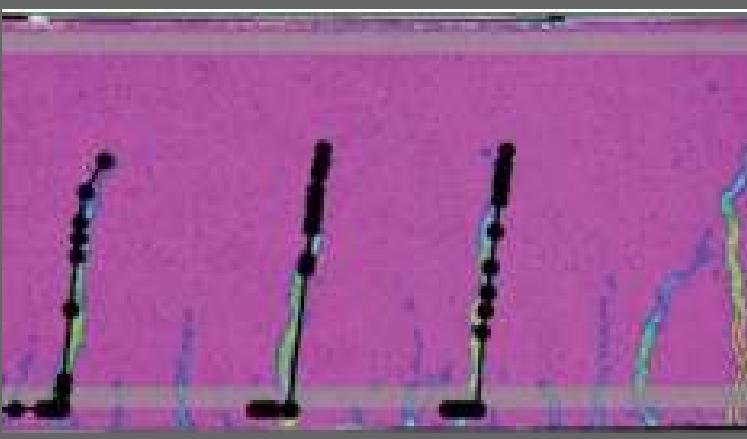

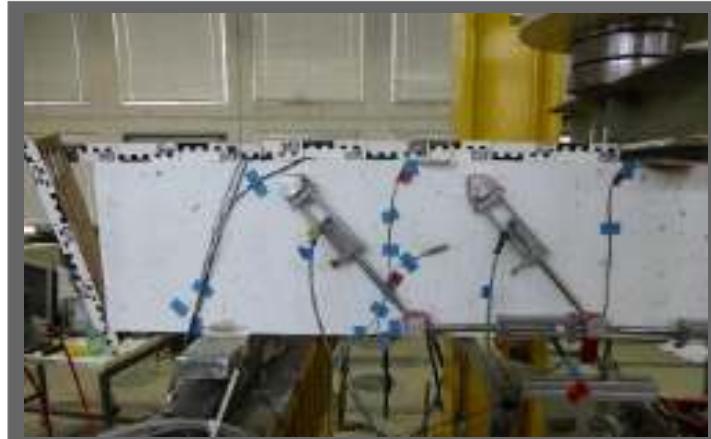

Bond - the ideal lab for learning the material modeling

- how to measure and characterize the bond behavior?
- what happens in the interface during debonding?
- how to model the debonding process?
- what happens if we change geometry or cross section?

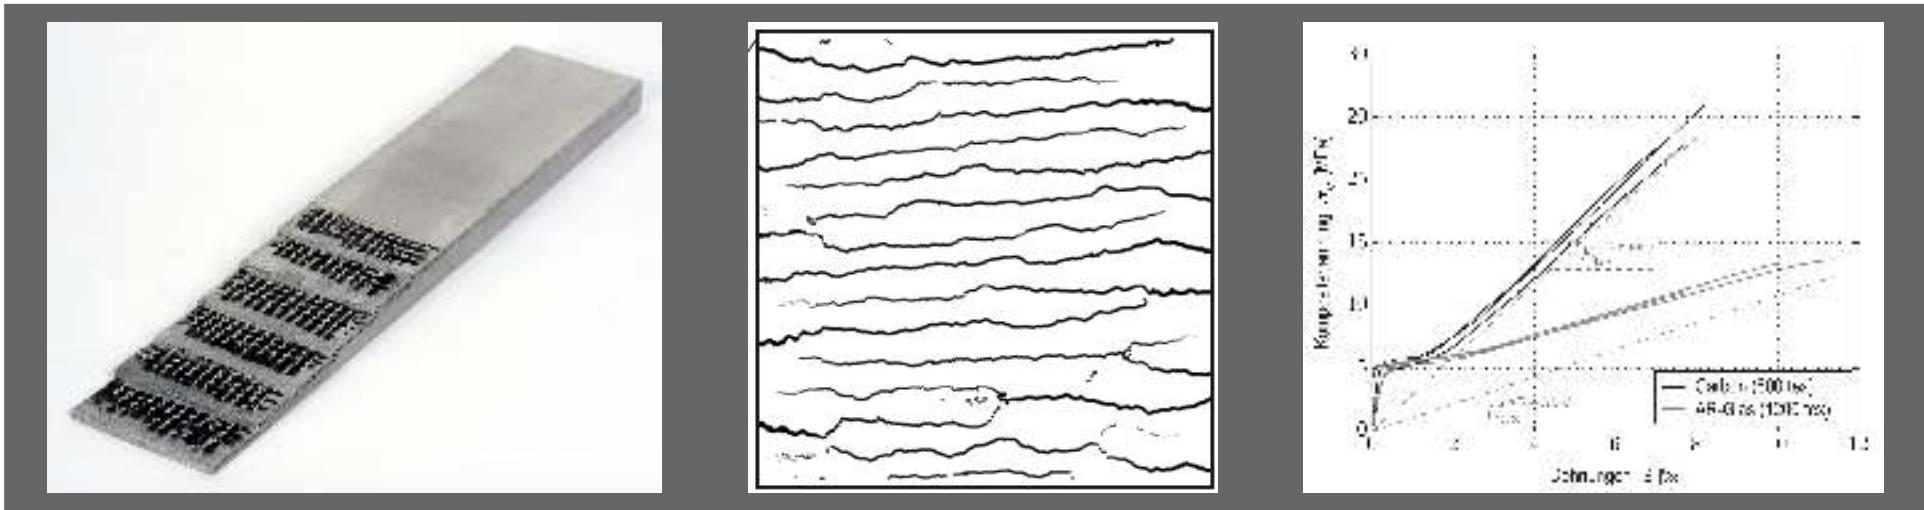

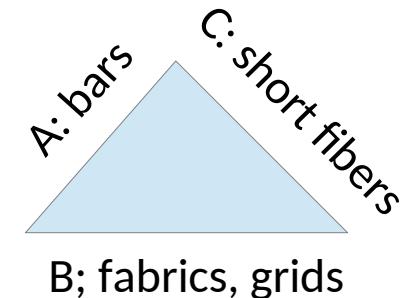

Cracking → brittle material behavior

- can cracks be useful?
- how do they emerge and propagate?
- how to model them?
- how to detect and observe them?

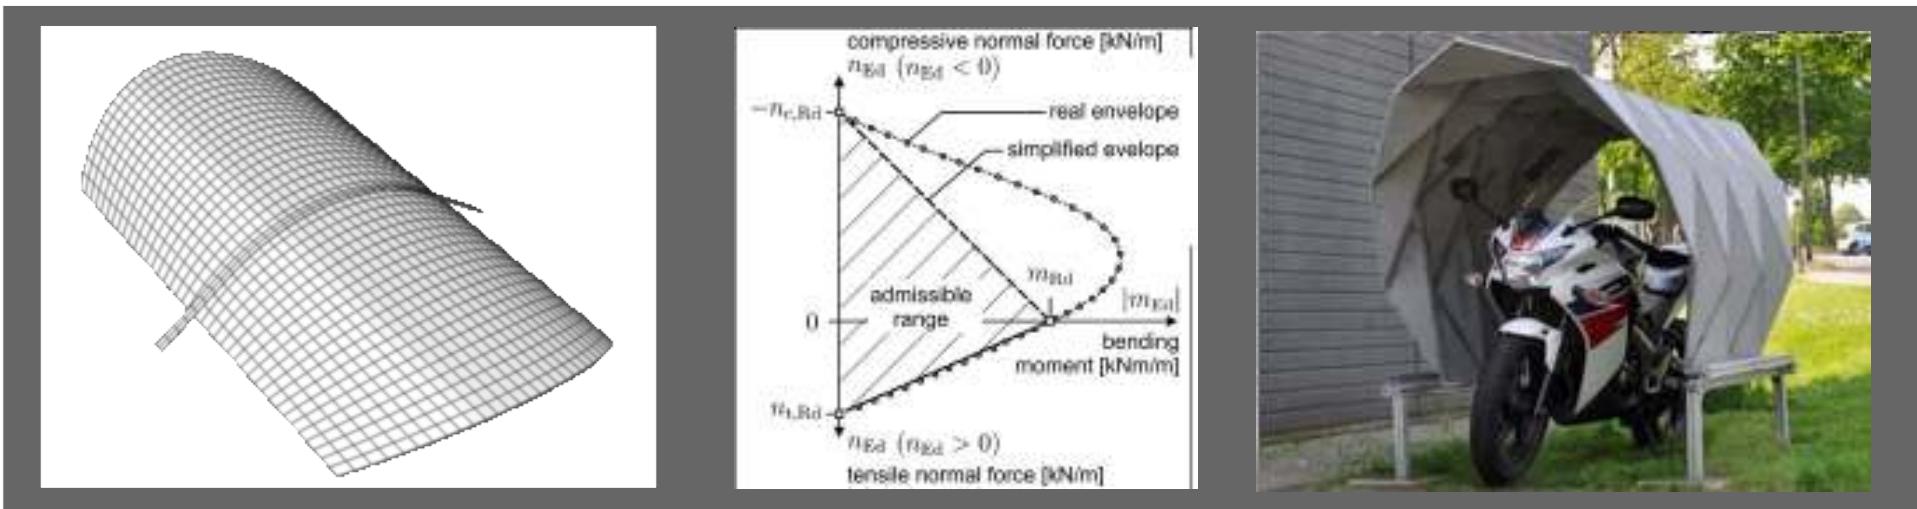

Composite – combine the advantages of two or more materials

- interplay of cracking / debonding ?
- how does it affect the material behavior?
- how to test / model / characterize it?
- how to design a high performance material?

Brittle-matrix composite structures

- structural behavior ?
- design & assessment methods ?
- applications & development potential ?

How to manage the complexity?

METHODS?

How to manage the complexity?

ELEMENTARY → COMPLEX

LOCAL → GLOBAL

GENERAL → SPECIAL

ABSTRACT → CONCRETE

IDEALIZATION → MODEL → CALIBRATION → VALIDATION

LOCAL → GLOBAL

ELEMENTARY → COMPLEX
